

Modulname Modulname	PI Optics and Laser Technology	416
Modulverantwortlicher/ Modulverantwortliche Module responsibility	Prof. Dr. Christian Rödel (Modulverantwortung)	
Qualifikationsziele Qualification goals	<p>Students are introduced to the field of optics and laser technology. Fundamental concepts of optics and laser physics are discussed in the lecture, which are the basis of optical instruments and technologies with relevance in modern technology.</p>	
Modulinhalte Module contents	<p>Ray optics, Imaging, Optical Instruments, Aberrations, Optical Design with Ray Tracing</p> <p>Wave optics, diffraction, Fourier Optics, Resolution in Optical Imaging, Interference, Michelson Interferometer, Wavefront, Zernike</p> <p>Spectroscopy, Spectroscopic Instruments, Atomic Physics, Bohr model, Photoelectric Effect</p> <p>Laser Physics, Population Inversion, Rate Equations, Gas Lasers, Diode-Pumped Solid-State Lasers (DPSSL), Excimer Lasers, Pulsed Lasers, Q-Switching, Nonlinear Optics, Second Harmonic Generation</p> <p>Beam Optics, Gaussian Optics, Characterization of Laser Beam Profiles, Fiber Optics</p> <p>Detectors, Cameras, Charged Coupled Devices (CCD)</p> <p>High Intensity Laser Interactions, Material Processing, Short-Wavelength Sources, Applications</p> <p>Basic Concepts of Quantum Optics and Applications in Quantum Cryptography</p>	
Lehrformen Forms of teaching	<p>Vorlesung (3 SWS)</p> <p>Praktikum (1 SWS)</p>	
Voraussetzungen für die Teilnahme Requirements for participation	Physics I & II	
Literatur/multimediale Lehr- und Lernprogramme Further readings/Learning programmes	<p>1. Saleh, Teich, „Fundamentals of Photonics“, Wiley, 3rd Edition, 2019</p> <p>2. Hecht, „Optics“, Pearson, 5th Edition, 2016</p>
